About Me

24/10/1999
Pordenone (PN), Italy

Skills

Programming:
- Firmware / software development in C11
- Python
- C++
- ARM assembly
- VHDL

Peripherals:
I2C, SPI, USART, ADC, Timers, bxCAN

Communication Protocols:
- CANOpen
- ModBus RTU

Frameworks
- LVGL
- Ceedling

Microcontroller Architectures:
- STM32 (ARM Cortex M0, M3, M4)
- ESP32
- AVR (ATMega328)

OS and RTOS:
- Linux (Ubuntu)
- FreeRTOS

Hardware:
- Schematic / PCB analysis for mixed signals application
- Electric / electronic measurement with multimeter and oscilloscope

Tools

- STM32 Development Tools
- Microchip Studio Development Tools
- Visual Studio, VS Code
- Git, GitHub
- Atlassian JIRA, Bitbucket (CI)
- Doxygen
- PlantUML
- GDB
- KiCad, Altium Designer
- LTSpice

Experience

Firmware Developer
May 2024 -

RDZ S.p.A.

Firmware / Software development and maintenment in C for Embedded Devices in the HVAC industry (ATU, temperature and humidity control systems) based on STM32 microcontrollers (ARM architecture).
Complementary, I'm involved in the development of Python scripts and tools to monitor real-time laboratory tests of our ATUs.
I'm involved also in the technical documentation of firmwares, leveraging Doxygen and PlantUML to describe implemented logics and FSMs.
Also, contributed to hardware requirements definition and troubleshooting for EMC compatibility certification, including cable management strategies.

Hardware Designer
Mar. 2023 -
Mar. 2024

UniUD E-Racing Team

In the electronic department of university's formula Student team, I was involved in the design of the HV recharge system of the vehicle.
My main activities were the design of PCBs, handling mixed signals and the design of the wiring system between the charging station and the vehicle's HV battery.
Complementary, I wrote the technical documentation needed to compete in the official events.

Education

Bachelor's Degree in Electronic Engineering

Università degli Studi di Udine

IT and networks path, deepening knowledge in C/C++ and multi-processes / multi-thread software development.
Thesis in "Development of a multi-process middleware for the emulation of shared memory in an eterogeneous distributed system".

High School Diploma

I.T.T.S "Vito Volterra" - San Donà di Piave

Electronics and Automation path.
Diploma's project consisting in the simulation of an automated warehouse using an UR3 robot.

Languages

Italian (Native)

English (B2)
